Summary of the five criteria (A-E) used to evaluate if a taxon belongs in a threatened category (Critically Endangered, Endangered or Vulnerable).

| Use any of the criteria A-E | Critically Endangered | Endangered | Vulnerable |
| ---: | :---: | :---: | :---: |
| A. Population reduction | Declines measured over the longer of 10 years or 3 generations |  |  |
| A1 | $\geq 90 \%$ | $\geq 70 \%$ | $\geq 50 \%$ |
| A2, A3 \& A4 | $\geq 80 \%$ | $\geq 50 \%$ | $\geq 30 \%$ |

A1. Population reduction observed, estimated, inferred, or suspected in the past where the causes of the reduction are clearly reversible AND understood AND have ceased, based on and specifying any of the following:
(a) direct observation
(b) an index of abundance appropriate to the taxon
(c) a decline in area of occupancy (AOO), extent of occurrence (EOO) and/or habitat quality
(d) actual or potential levels of exploitation
(e) effects of introduced taxa, hybridization, pathogens, pollutants, competitors or parasites.

A2. Population reduction observed, estimated, inferred, or suspected in the past where the causes of reduction may not have ceased OR may not be understood OR may not be reversible, based on (a) to (e) under A1.
A3. Population reduction projected or suspected to be met in the future (up to a maximum of 100 years) based on (b) to (e) under A1.
A4. An observed, estimated, inferred, projected or suspected population reduction (up to a maximum of 100 years) where the time period must include both the past and the future, and where the causes of reduction may not have ceased OR may not be understood OR may not be reversible, based on (a) to (e) under A1.
B. Geographic range in the form of either B1 (extent of occurrence) AND/OR B2 (area of occupancy)

B1. Extent of occurrence (EOO)
$<100 \mathrm{~km}^{2}$
$<10 \mathrm{~km}^{2}$
< 5,000 km ${ }^{2}$
$<20,000 \mathrm{~km}^{2}$
B2. Area of occupancy (AOO)
$<500 \mathrm{~km}^{2}$
$<2,000 \mathrm{~km}^{2}$
AND at least 2 of the following:

(a) Severely fragmented, OR | Number of locations | $=1$ | $\leq 5$ | $\leq 10$ |
| :--- | :--- | :--- | :--- |

(b) Continuing decline in any of: (i) extent of occurrence; (ii) area of occupancy; (iii) area, extent and/or quality of habitat; (iv) number of locations or subpopulations; (v) number of mature individuals.
(c) Extreme fluctuations in any of: (i) extent of occurrence; (ii) area of occupancy; (iii) number of locations or subpopulations; (iv) number of mature individuals.

## C. Small population size and decline

Number of mature
individuals

## AND either C1 or C2:

C1. An estimated continuing decline of at least: (up to a max. of 100 years in future)

$$
<2,500
$$

$20 \%$ in 5 years or 2 generations generation (a) and/or (b):

C2. A continuing decline AND
(a i) Number of mature individuals in each subpopulation: or
(a ii) \% individuals in one subpopulation $=$
$10 \%$ in 10 years or 3 generations
(b) Extreme fluctuations in the number of mature individuals.

## D. Very small or restricted population Either:

Number of mature
individuals

$$
<50
$$

$$
<250
$$

D1. $<1,000$

## AND/OR

VU D2. Restricted area of occupancy or number of locations with a plausible future threat that could drive the taxon to CR or EX in a very short time.

D2. typically: $\mathrm{AOO}<20 \mathrm{~km}^{2}$ or number of locations $\leq 5$
E. Quantitative Analysis

Indicating the probability of extinction in the wild to be: $\qquad$
$\geq 50 \%$ in 10 years or 3
$\geq 20 \%$ in 20 years or 5 generations (100 years max.)
